I've enthusiastically told all of my friends about the wonderful place you have. Some of us are hoping to organize a group retreat. Rest assured that you'll see me again. ## ❑ HTML Layout Techniques:

- HTML tables
- CSS float property
- CSS framework
- CSS flexbox

❑ The <table> element was not designed to be a layout tool! The purpose of the <table> element is to display tabular data. **So, do not use tables for your page layout! They will bring a mess into your code.**

❑ You can use div, span and HTML5 layout elements along with CSS for pages layout instead of tables.
